

The following information deals with which BERNINA embroidery computers run on the new Windows® 7 Operating System released by Microsoft in November 2009. As far as our BERNINA software products are concerned, we can report that by and large, Windows® 7 behaves very similarly to Windows Vista. Below, you'll find our BERNINA software products listed individually. You can always find out about the requirements for BERNINA software products in terms of Windows® 7 by checking back there.

PLEASE NOTE: Each computer may be configured differently, and its individual settings may affect how software and hardware attempt to operate on it. There is a chance that unknown problems may arise with your BERNINA embroidery software or hardware on any operating system, especially a brand-new one such as Windows 7. Since Windows 7 is only just being released onto the market, please bear in mind that further investigation may be required in order to respond to and solve your problem. Software Support will do everything within its power to resolve your issue. Your patience is greatly appreciated.

Page break

Note: When the BERNINA Embroidery Software V6 installation wishes to install the Active Sync program, a compatibility message is displayed.

This must be closed by clicking on 'Cancel' in order for the installation to continue.

*Sewing and Embroidery Machines*

No further measures are necessary for Windows® 7 for the following sewing and embroidery machines:

- BERNINA 830 (Firmware V29.39.00)
- Artista 630/640 (Firmware V1.00.25)
- Aurora 430/440/450 (32-bit operating system only)

- bernette 340 deco / bernina deco330
- Artista 165 - 185  
*artista730/200*

To enable the artista730/200 to be connected with a Windows® 7 operating system:

- the artista 730/200 requires firmware V4.06 or higher
- the [Windows Mobile Device Center 6.1](#) (32- or 64-bit operating system) must be installed on the computer (this must be downloaded from the [Microsoft Webpage](#) and installed).
